Jobs Report Delivers A Positive Employment Backdrop

The January Employment Situation Report was published by the Bureau of Labor Statistics (BLS) last Wednesday and showed nonfarm payrolls increasing by 130,000, significantly exceeding expectations.

Private payrolls rose by 172,000, also significantly exceeding expectations. The unemployment rate fell from 4.4% to 4.3%. This was a strong, positive report. On the government side, jobs declined by 42,000 overall, with federal government jobs down 34,000, state jobs down 18,000, and local jobs up 10,000.

The report also included the annual benchmark revision, which lowered prior-year employment estimates. March 2025 was revised downward by about 862,000 on a not seasonally adjusted basis, while seasonally adjusted revisions totaled a loss of roughly 898,000 – indicating that the prior period was weaker than previously reported. The market seemed to easily move past this revision. The market is still looking for two interest rate cuts: one is priced in for July and another one for later in the year. With last Friday's release of the January Consumer Price Index (CPI), BLS will have fully resumed its standard monthly publication schedule, following disruptions from the October 2025 government shutdown.

Federal Government Employment Has Shrunk By 10% In The Past 15 Months

Consumer Price Index Also Delivers A Positive

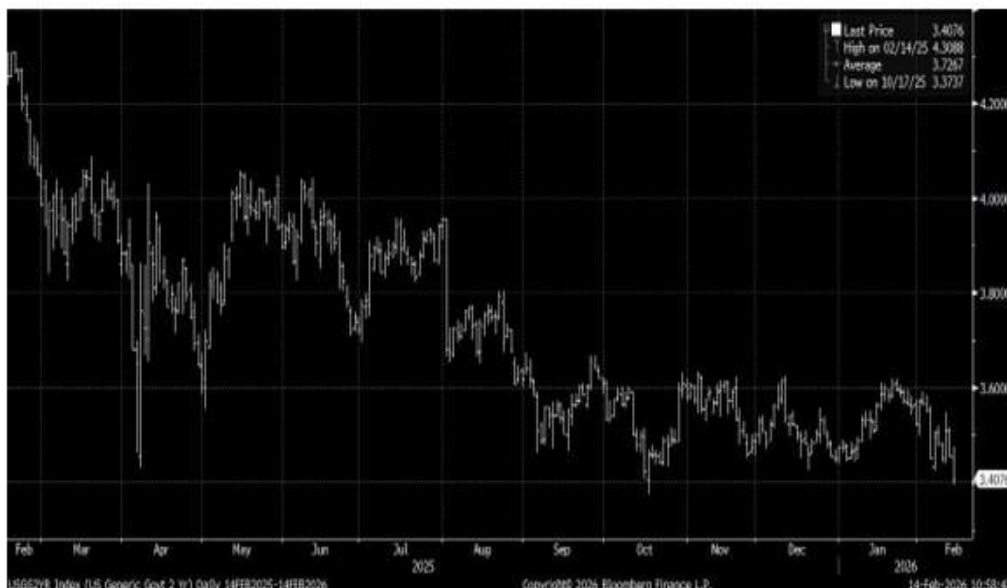

Last week's Consumer Price Index (CPI) was modestly better than expected, registering 2.4% versus expectations of 2.5%. The market celebrated this report, particularly the fixed income market. The 2-Year Treasury yield fell to 3.4% and the 10-Year fell to 4.0%.

The 10-Year Treasury Yield Falls Sharply To 4.0%: Trend Remains Down

4Q Earnings Season Is Strong But Not Beating Expectations In A Big Way

As we move deeper into earnings season, 74% of S&P 500 companies have reported thus far. The earnings growth rate for the fourth quarter is 13.2%, with companies beating expectations by approximately 7%, which is below the long-term averages according to FactSet. On the revenue side, FactSet is reporting a revenue growth rate for the quarter of 9% – which is the highest revenue growth rate reported by the index since 3Q 2022 (11.0%). This also marks the 21st consecutive quarter of revenue growth for the index. So far, earnings season has been strong, but results have not delivered enough upside surprises to drive markets significantly higher.

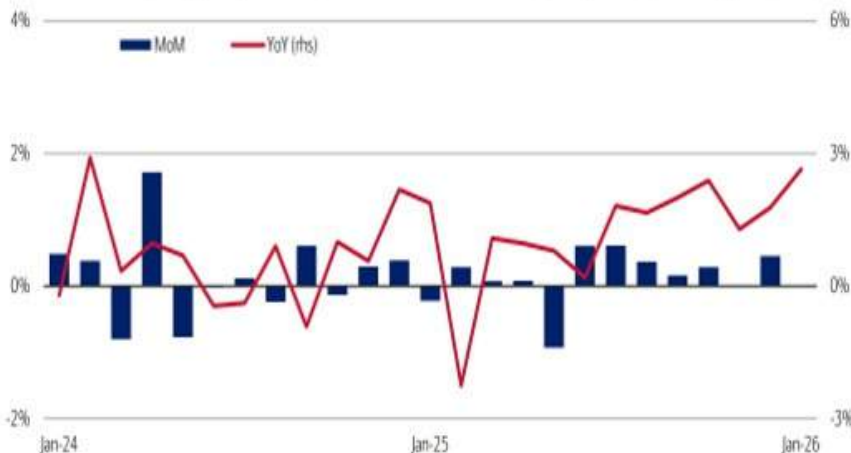

Consumer Remains Resilient

Despite weak December retail sales data last week, Bank of America's (BoFA) real-time customer data tells a more resilient story. For January, the bank saw card spend rising sharply, with total credit and debit card spending per household increasing 2.6% year-over-year (YoY) in January 2026 – the largest increase since February 2024 – up from 1.8% YoY in December. *The crunch for consumers is rent, which BofA estimates now absorbs roughly 50% of income.* The lower-income consumer is still spending but at a much lower rate than the high-income consumer.

BoFA January Card Spending Rises 2.6%

Exhibit 1: January's spending growth reached the strongest YoY level in nearly two years

Secular Breakout In Global Metal Stocks

We maintain that the metals and metal stocks are in a new secular bull market and on a global scale. The MSCI Global Select Metals & Mining Producers ETF (PICK) offers a global way to gain exposure to metals stocks while adding international diversification.

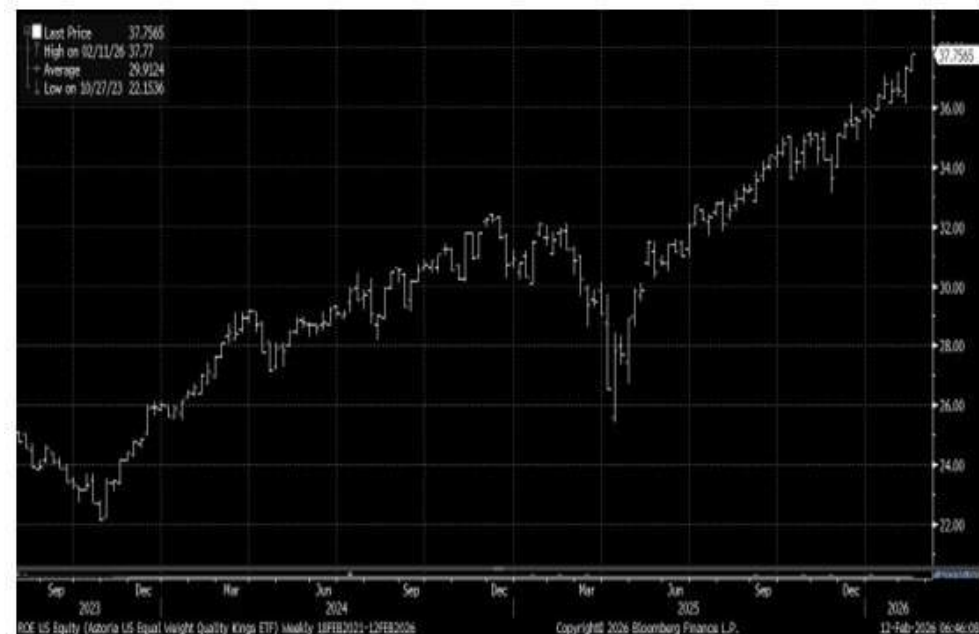

MSCI Global Select Metals & Mining Producers ETF (PICK): Secular Bull Breakout

Equal-Weighted Indices Performing Well As Market Breadth Expands

With market breadth expanding, the equal-weighted part of the market is starting to outperform. The Astoria US Equal Weight Quality Kings ETF (ROE) screens large- and mid-cap stocks for quality and invests in the top 100 names. In our view, this makes it a strong alternative to the equal-weight S&P 500 ETF (RSP).

Sector Readings: Energy Strongest, Followed By Materials And Industrials; Financials Weakest

Energy was strongest last week, followed by Materials, then Industrials. Financials were in last place, followed by Consumer Discretionary. Information Technology continues to correct after many months of being top ranked.

Our sector model analyzes S&P 500 GICS sector classifications, using a weighted measure of price momentum across three time periods. We rank each sector from best to worst based upon the average of its 40-, 26-, and 13-week relative price performances. We rank each sector from 1-11 with 1 being the strongest and 11 the weakest.

Sector Rankings By 40-, 26-, And 13-Week Average Relative Price Performance

	Feb 13	Feb 6	Jan 30	Jan 23	Jan 16	Jan 9	Jan 2	Dec 26
Consumer Discretionary	10	8	6	5	4	3	5	3
Consumer Staples	5	6	8	8	10	10	11	10
Energy	1	1	2	3	5	8	8	9
Financials	11	9	9	9	8	7	6	6
Healthcare	6	5	7	6	6	5	3	4
Industrials	3	3	4	7	2	4	4	5
Information Technology	8	7	5	4	3	2	2	2
Materials	2	4	3	2	7	6	7	7
Communication Services	4	2	1	1	1	1	1	1
Utilities	7	11	10	10	9	9	9	8
Real Estate	9	10	11	11	11	11	10	11

OBOS List: Materials, Industrials, Consumer Staples, and Energy Overbought; Information Technology Oversold

Materials, Industrials, Consumer Staples, and Energy are all overbought; Real Estate and Communications Services are near overbought. Information Technology is oversold, while Consumer Discretionary is near oversold. It is unusual that so many sectors are in stretched positions, and Materials and Industrials are very extended.

With many sectors extended in price, we are expecting continued sector rotation volatility.

Our tactical sector rotation model uses the S&P 500 GICS sector classifications. We apply a 13-week rate of change methodology that normalizes the rankings from overbought (OB) to oversold (OS). An industry group is overbought when it has risen too far too fast, relative to the rest of the market, based upon its normal movement. Conversely, it's oversold when it has lost too much too fast, relative to the rest of the market, based upon its normal movement. Over time, a sector tends to move back toward its normal rate of change, relative to the rest of the market. Overbought sectors tend to slow their pace of gains in relative price, while oversold sectors tend to improve in relative price until they reach their average performance again.

Here's our methodology: the overbought-oversold table of sectors measures the 13-week rate of change in the relative price of each sector. We then average (i.e., smooth) this for 3 weeks and normalize the results. Normalized oscillator values over 1.0 are considered overbought, while those between 0.6 and 1.0 are considered near overbought. Normalized oscillator values below -1.0 are considered oversold, while those between -0.6 and -1.0 are considered near oversold.

Sector Overbought / Oversold List as of 13 February 2026

rank	S&P Sector	normalized Oscillator
1	Materials	3.3932
2	Industrials	3.3831
3	Consumer Staples	2.3517
4	Energy	1.9237 <i>Overbought</i>
5	Real Estate	0.8797
6	Communication Services	0.6278 <i>Near Overbought</i>
7	Utilities	0.5625 <i>Neutral</i>
8	Healthcare	0.3241
9	Financials	-0.4761 <i>Neutral</i>
10	Consumer Discretionary	-0.8564 <i>Near Oversold</i>
11	Information Technology	-1.2026 <i>Oversold</i>

Fed Signals and Economic Momentum

This week will bring an onslaught of economic data, corporate earnings, and the always-intriguing Fed minutes.

By week's end, we'll have the release of the Federal Open Market Committee (FOMC) minutes from its January meeting. This will offer insight into how Federal Reserve (Fed) officials are assessing the labor market and inflation. Current data continues to support a "wait-and-see" stance from the Fed, which likely hold rates steady while positioning for two potential cuts later this year. Meanwhile, manufacturing and durable goods reports will provide fresh signals on capital expenditure and economic growth as earnings season moves toward its conclusion.
